Raahav Ajith K S

Flutter Developer | 5+ Years Experience | BLoC | Clean Architecture | AI-Assisted Development

+91 6382799376 | ajithraahav@gmail.com | LinkedIn | GitHub | Portfolio | Tamil Nadu, India

Professional Summary

Results-driven Flutter Developer with 5+ years of experience building scalable, high-performance mobile and web applications using Flutter and Dart. Expert in architecting maintainable applications using BLoC, Cubit, Provider, Freezed, Clean Architecture, MVVM, and Repository Pattern. Strong background in performance optimization (reducing widget rebuilds by 30%), offline-first architectures, REST APIs, and mobile CI/CD pipelines. Experienced in leveraging AI-assisted development tools (Cursor, Claude Code, ChatGPT) to accelerate feature delivery, automate testing, and enhance code review processes.

Technical Skills

Programming: Dart, JavaScript, Kotlin, HTML, CSS

Frameworks: Flutter, Flutter Web (latest stable versions)

State Management: BLoC, Cubit, Provider, MobX, GetX

Architecture: Clean Architecture, MVVM, Repository Pattern, SOLID, Modular Architecture

Flutter: Widget Lifecycle, Flutter Internals, Navigator 2.0, go_router, Deep Linking, Reusable Widgets

API & Networking: REST APIs, GraphQL (Basic), JSON, Caching, Error Handling, Retry Mechanisms, Protobuf, gRPC

Code Generation: Freezed, JSON Serialization, Immutable Models

Mobile Integrations: Firebase (Auth, FCM, Crashlytics), Google Maps API, Location Services, Razorpay

Databases: Hive, SQLite, MySQL

Performance: Flutter DevTools, Performance Profiling, Widget Rebuild Optimization, Repaint Boundary, Image Caching, Lazy Loading, Pagination, Memory Profiling, Sentry

Testing: Unit Testing, Widget Testing, Test Generation, Debugging, Code Coverage

DevOps & Tools: Git, GitHub Actions, Azure DevOps (CI/CD), Fastlane (Basic), Postman

Platform Integration: Platform Channels (Basic), FFI (Explored)

AI-Assisted Development: LLMs, Cursor, Claude Code, Antigravity, ChatGPT, Prompt Engineering, AI Code Generation, Refactoring, Test Generation, Debugging, Code Review

AI/ML Integration: MediaPipe, TensorFlow Lite (TFLite), On-device ML Model Integration

Professional Experience

MOURI Tech Limited — *Consultant – Flutter Developer* May 2026 – Present
Chennai, India

- Engineered production-grade Flutter features for a US-based healthcare application using BLoC, Clean Architecture, Freezed, and structured API integrations, achieving 99.9% crash-free stability.
- Spearheaded cross-functional collaboration across backend, UI/UX, QA, and client teams while leveraging LLMs and AI-assisted tools (Cursor, Claude Code) to accelerate feature delivery by 25% in a HIPAA-compliant environment.

Galentic Technology — *Flutter Developer* Apr 2025 – Aug 2025
Bengaluru, India

- Developed modular Flutter Web applications utilizing Clean Architecture, BLoC, and reusable component libraries.
- Improved web application responsiveness and data reliability by 35% through intelligent caching, pagination, exponential-backoff retry mechanisms, and Flutter performance profiling.

Techzarinfo Software Solutions — *Flutter Developer* May 2023 – Mar 2024
Trichy, India

- Built and deployed cross-platform Flutter applications using BLoC, REST APIs, Firebase, and scalable modular architecture.
- Integrated core Firebase services (Authentication, FCM, Crashlytics) to ensure robust production monitoring and seamless background push notifications.
- Implemented declarative navigation flows using go_router and successfully managed complex deep linking scenarios.

Yavar Tech Works — *Software Developer* Mar 2022 – May 2023
Coimbatore, India

- Developed scalable booking and payment applications integrating REST APIs and third-party financial services.

– Architected offline-first local data storage using SQLite and Hive, ensuring zero-downtime functionality in low-connectivity zones.
– Created highly reusable UI components and optimized local database queries to reduce data retrieval latency.

Exciteon Tree of Technology — *Software Developer* Oct 2020 – Mar 2022
Trichy, India
– Developed and maintained responsive mobile and web applications with robust REST API integrations and reusable UI components.
– Partnered with cross-functional teams to resolve critical production bugs, debug application failures, and boost platform stability.

Selected Projects

DIGIT Patient Rehabilitation & Clinical Assessment Platform — *Flutter Healthcare Application* 2026
US Client | MOURI Tech
– Developed advanced Flutter workflows for patient rehabilitation assessment and progress tracking, integrating precise clinical measurements like PIP flexion and contracture evaluation using BLoC and Clean Architecture.
– Constructed reusable widgets and immutable data models with Freezed, integrating secure backend APIs within a strict HIPAA-focused clinical environment.

Innovatiq Marketing Tracking System — *Workforce Monitoring Platform* 2025
Chennai
– Engineered real-time employee tracking modules utilizing background geolocation services, BLoC state management, and local SQLite caching.
– Optimized background synchronization workflows to guarantee reliable data transmission during intermittent network availability.

Tillio POS Platform – Dubai — *POS, KDS & Delivery System* 2025
Dubai
– Enhanced retail POS and restaurant applications by developing a real-time Kitchen Display System (KDS) for instant order synchronization.
– Built a companion delivery partner app featuring integrated Google Maps routing, turn-by-turn navigation, and location-aware workflows.

Urakka Sol – Police Reporting App — *Mobile Platform* 2024
Tamil Nadu
– Created a secure citizen reporting application supporting rich multimedia submissions (image, video, and voice incident reports).
– Implemented structured offline-first reporting workflows and seamless backend API synchronization for rapid data processing.

Norinco Marine Management System — *Offline-first Fleet Management App* 2024
Chennai
– Designed and built an offline-first enterprise Flutter application for maritime vessel maintenance, crew records, and incident tracking.
– Implemented robust bulk SQLite storage powered by BLoC and Clean Architecture for vessels operating under deep-sea connectivity limits.

Muslim Salah Prayer App — *Prayer Time & Utility Application* 2023
Chennai
– Developed a location-aware prayer timing utility using core device location services and RESTful API integrations.
– Designed a responsive, dynamic UI adapting fluidly to timezone changes and geo-coordinates.

Education

University of Madras — *BCA (Pursuing)* Expected 2027
Chennai

Seshasayee Institute of Technology — *Diploma in Engineering* 2017 – 2020
Trichy
